ViVOtech Launches ViVOpay Kiosk II for Rapid Integration of Contactless & NFC Technology with Customer-Facing Self-Service Payment Systems

ViVOtech, the leader in Near Field Communication (NFC) mobile phone and contactless payment systems, today launched the most flexible contactless payment reader for the Kiosk, Transit turnstile, Bus validator and Ticketing markets. The new ViVOpay Kiosk II is a two-piece modular reader that enables easy installation in new self-service systems and is certified to work with all major contactless payment programs without requiring the total systems to go through a rigorous and costly compliance re-certification process with card associations and network providers.

The ViVOpay Kiosk II is a flexible contactless reader that is comprised of a compact controller module and a customer-facing contactless antenna module for easy integration into a new customer facing self-service system. Each module in the ViVOpay solution is packaged individually, giving equipment manufacturers complete flexibility in integrating contactless payment functionality with their systems. This flexible design approach allows the controller module to be securely installed within the cabinetry of the system while the small footprint antenna is installed in a customer-facing location with minimal effort.

"Self service markets are experiencing rapid growth worldwide and manufacturers of self-service systems are demanding a flexible pre-certified contactless reader that can be quickly and easily installed in new systems," said Mohammad Khan, ViVOtech President and Founder. "The modular design of our new ViVOpay Kiosk II and pre-certification with card associations and network providers enables solution providers in transportation, retail, parking and other industries to deliver contactless and NFC mobile-enabled devices to market fast and efficiently."

The ViVOpay Kiosk II features a weather-proof customer-facing antenna that allows it to be used in self-ordering kiosk systems across a wide variety of industries including parking meters, ticket validation/payment machines, transit turnstile systems, airport self check-in systems, on buses ticket acceptance machines, and many more. ViVOpay Kiosk II also enables self service systems to accept transactions from NFC mobile phone for payments, ticketing, promotions, and coupons redemption applications.

ViVOpay Kiosk II is certified by all major worldwide contactless payment programs.

ViVOtech will be demonstrating the new ViVOpay Kiosk II contactless payment reader at the CARTES & IDentification 2008 show in Paris, November 4th through the 6th, in booth # 4 Q 028.
